**STATE TEACHERS RETIREMENT SYSTEM OF OHIO  
ACTUARIAL VALUATION AND GASB 74/75 REPORTING  
FOR JUNE 30, 2021 MEASUREMENT DATE**

**SECTION I – VALUATION SUMMARY**

The State Teachers Retirement System of Ohio has engaged Cheiron to provide an analysis of its post-employment benefit liabilities as of June 30, 2021. The primary purposes of performing this actuarial valuation are to:

- Estimate the Actuarially Determined Contribution (ADC) and the Net OPEB Liability (NOL) of the retiree health benefits using GASB 74 and 75 methodology under the current funding strategy,
- Provide disclosures for financial statements, and
- Provide projections for ADC, Net OPEB Liability (NOL), and Actuarial Liabilities.

We have determined costs, liabilities, and trends for the substantive plan using actuarial assumptions and methods that we consider reasonable.

### **GASB’s OPEB Requirements**

GASB’s Statement 74 refers to the financial reporting for post-employment benefit plans other than pension plans, and Statement 75 refers to the employer accounting for these plans. Statement 74 is generally applicable where an entity has a separate trust or fund for OPEB benefits. We understand that the State Teachers Retirement System of Ohio (STRS Ohio) has a trust used to fund future OPEB obligations. The GASB No. 74 Statements are effective for the plan year ending June 30, 2017. The GASB 74 and 75 valuation sections are provided below.

Statement 75, which was adopted in the Fiscal Year Ending (FYE) June 30, 2018, requires the employer to book the actuarial cost (net of employee, retiree, and their dependents’ contributions) of the Plan as an expense on its financial statements. Additional disclosures required by GASB 74 and 75 include a description of the substantive plan, summary of significant accounting policies (which we have not included in this report), contributions, and a statement of funding progress, along with the methods and assumptions used for these disclosures.

### **Funding Policy**

The State Teachers Retirement System of Ohio has a funding policy to contribute to the Actuarially Determined Contribution (ADC). For this purpose, the ADC is calculated as the Normal Cost determined under the Entry Age Normal actuarial cost method, plus the amortization of the Unfunded Actuarial Liability over a 30-year open level percent of pay, plus anticipated administrative expenses. Currently, the ADC is negative and is projected to remain negative, thus the employer is not expected to make any future contributions to the Health Fund.

**SECTION I – VALUATION SUMMARY**

Table I-1 below summarizes the June 30, 2021 and June 30, 2020 actuarial valuation results.

<b>Table I-1 Summary of Key Valuation Results</b>		
<b>Valuation Date</b>	<b>June 30, 2021</b>	<b>June 30, 2020</b>

Funded Ratio	174.73%	182.13%

The Total Actuarial Liability increased from \$2.14 billion under the prior valuation to \$2.82 billion under this valuation. In addition to the expected increase in liability of \$ 11.02 million due to normal cost, benefit payments, and interest, the Plan experienced other changes in liability attributable to \$556.99 million increase due to benefit changes, \$16.54 million decrease due to population changes, and a \$130.04 million decrease due to changes in assumptions and benefits. A description on these changes are listed below on page 4 and in Appendix B and C.

ACTUARIAL VALUATION AND GASB 74/75 REPORTING  
FOR JUNE 30, 2021 MEASUREMENT DATE**

**SECTION I – VALUATION SUMMARY**

The Actuarially Determined Contribution (ADC), calculated in Table I-2 below, is the recommended contribution to the Retiree Health Care Plan for the reporting period, determined in conformity with Actuarial Standards of Practice. The State Teachers Retirement System of Ohio has elected to define the ADC in a manner consistent with the annual required contribution under the previous GASB 43 accounting rules. The ADC calculation consists of adding the Normal Cost of the Plan to the amortization of the Unfunded Liability. The Normal Cost and Actuarial Liability are determined using a 7.00% discount rate for June 30, 2021 and 7.45% for June 30, 2020, and the Unfunded Liability (if any) is amortized using an open 30-year amortization period calculated as a level percent of payroll. The ADC for June 30, 2021 and June 30, 2020 was calculated to be zero due to the Plan being over 100% funded.

Census changes	16,537
Change in claims, trend and discount assumptions	<u>(130,044)</u>
Total changes	\$ (670,501)

*Benefit changes:* refers to the change in the 2022 subsidy percentage and the base amount for Non-Medicare participants, from 2.055% per year to 2.1% per year, max 30 years. Medicare medical cost decreased 16%, whereas the Medicare net pharmacy cost increased 30%, while the actual premium charged retirees dropped 16%.

*Census changes:* refers to the change in population and how it impacts the valuation results. The updated census with trended claims provided a gain to the Plan.

*Change in claims, trends and discount assumptions:* refers to the change in claim curves, trend and discount assumptions. The discount rate was lowered from 7.45% to 7.0% for this valuation year. The change in discount rate increased the liabilities.

ACTUARIAL VALUATION AND GASB 74/75 REPORTING  
FOR JUNE 30, 2021 MEASUREMENT DATE**

**SECTION I – VALUATION SUMMARY**

**Projected Trends – Asset Return 7.00%**

Looking beyond 2021, the charts below project the assets and liabilities and the funding costs for the next 20 years. The projection below assumes the Plan contributes the ADC (Normal Cost plus the amortization of the Unfunded Liability) when the amount is greater than \$0. The projection also assumes the Plan earns 7.00% return over the entire period.

The left-hand chart shows the projected Actuarial Liability (grey bars) increasing from \$2.8 billion to over \$4.2 billion over the next 20 years. The red line on the same chart projects the GASB liability (i.e., the figure that appears on the employer’s financial statements). As of June 30, 2021, the Net OPEB Liability (NOL) is currently less than \$0 and is projected to remain less than \$0 over the next 20 years. The green line projects the assets in the Plan increasing from \$4.90 billion to approximately \$9.9 billion. The funding percentage is expected to grow from 175% to 236% over the next 20 years.

The right-hand chart shows the annual costs. Benefit payments, net of retiree contributions, are shown by the grey area and are projected from \$178 million to \$250 million over the 20 year period. The blue line represents the System’s assumed contributions to the Trust, the Actuarially Determined Contributions (ADC). Currently, the ADC is zero and projected to remain at zero over the next 20 years, thus not shown in the graph above. The accounting expense is the change in the Unfunded Liability plus the change in deferred outflows/inflows plus the employer contributions. The accounting expense, shown by the red line, is projected to remain below zero, thus not shown in the graph above, over the next 20 years.

**Projected Trends – Variable Asset Returns**

The charts below show the expected assets and liabilities for the next 20 years should the fund earn returns that follow those from 1963 to 1983, with 60% invested in equities and 40% in fixed income. The average expected return over the 20-year period is 6.75%.

The assumed returns are:

	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Average Return
Fiscal Year Ending	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2021-2030

Expected Return	15.64%	12.79%	5.30%	0.45%	11.31%	11.81%	10.22%	-1.52%	48.70%	-2.14%	10.49%
											2021-2040
											6.75%

The left-hand chart shows the projected Actuarial Liability (grey bars) increasing from \$2.8 billion to almost \$4.2 billion over the next 20 years. The red line on the same chart projects the GASB liability (i.e., the figure that appears on the employer’s financial statements). As of June 30, 2021, the Net OPEB Liability (NOL) is currently less than \$0 and is projected to remain less than \$0 over the next 20 years. The green line projects the assets in the Plan increasing from \$4.90 billion to approximately \$7.8 billion. The funding percentage is expected to jump around starting at 175% and ending at 186% over the next 20 years.

The right-hand chart shows the annual costs. Benefit payments, net of retiree contributions, are shown by the grey area and are projected from \$178 million to \$250 million. The blue line represents the System’s assumed contributions to the Trust, the Actuarially Determined Contributions (ADC). Currently, the ADC is zero and projected to remain at zero over the next 20 years, thus not shown in the graph above. The accounting expense is the change in the unfunded liability plus the change in deferred outflows/inflows plus the employer contributions. The accounting expense, shown by the red line, is projected to become very volatile due to the investment gains and losses, thus the red spikes.

**SECTION I – VALUATION SUMMARY**

Table I-5 below summarizes the expected fiduciary net position and total expected net benefit payments for the next 30 years. The projection below is used to determine the discount rate assuming the STRS Ohio continues to not make contributions to the Health Fund assets. Based on these assumptions, the OPEB Plan’s Fiduciary Net Position is projected to be available to make all projected future benefit payments of current Plan members.

**SECTION II –GASB 74 AND 75 SUMMARY**

The purpose of the remainder of this report is to provide accounting and financial disclosure information under the Governmental Accounting Standards Board (GASB) Statement No. 74 and 75 for the Other Postemployment Benefits Plan provided by the State Teachers Retirement System of Ohio. This information includes:

- Determination of the discount rate as of June 30, 2021,
- Sensitivity of the Net OPEB Liability to changes in discount rates and health care cost trend rates,
- Note disclosures and required supplementary information under GASB 74 for the Plan, and
- Note disclosures and required supplementary information under GASB 75 for the collective employers.

**Highlights**

The OPEB Plan is currently funded in an OPEB trust. As a result, this report also contains disclosures required by GASB 74. The measurement date is June 30, 2021, which is used for the Plan’s GASB 74 reporting. The employer’s GASB 75 reporting as of June 30, 2021, is based on the June 30, 2020 measurement date. Measurements are based on the Total OPEB Liability and the fair value of assets as of June 30, 2021.

Table II-1 provides a summary of the key GASB 74/75 results during this measurement period.

**STATE TEACHERS RETIREMENT SYSTEM OF OHIO  
ACTUARIAL VALUATION AND GASB 74/75 REPORTING  
FOR JUNE 30, 2021 MEASUREMENT DATE**

**SECTION II –GASB 74 AND 75 SUMMARY**

At the June 30, 2021 reporting date, the System will report a Net OPEB Liability (NOL) of (\$2,108.4) million, deferred outflows of resources of \$209.8 million, and Deferred Inflows of Resources of \$2,228.5 million related to the Plan. Consequently, the net impact on the System's statement of net position due to the Plan would be (\$89.6) million  $[(\$89.6) = (\$2,108.4) - \$209.8 + \$2,228.5]$ . In addition, any contributions between the measurement date and the reporting date would be reported as deferred outflows of resources to offset the cash outflows reported.

The NOL decreased by approximately \$350.9 million during the measurement period. Changes in NOL due to Plan changes are recognized immediately. Change in NOL due to actuarial gains and losses as well as assumption changes is recognized over the average remaining service life, determined at the beginning of each measurement period, which is seven years as of both the current and prior measurement period for the Plan. The change in NOL due to investment gains and losses is recognized in OPEB expense over five years, beginning in the year of occurrence. Unrecognized amounts are reported as deferred outflows of resources and Deferred Inflows of Resources.

For the reporting year ending June 30, 2021, the annual OPEB expense is (\$148.3) million or (1.28%) of covered-employee payroll. This amount reflects the employer's contributions to the Plan during the measurement period, \$0.0 million, plus the change in the net impact on the System's statement of net position  $[(\$148.3) = \$0.0 + (\$89.6) - \$58.7]$ . Volatility in OPEB expense from year to year is to be expected. A breakdown of the components of the net OPEB expense is shown in Section VI of this report.

**SECTION III – CERTIFICATION**

This report presents the June 30, 2021 actuarial valuation and disclosure information under the Governmental Accounting Standards Board (GASB) Statement Nos. 74 and 75 for the Other Postemployment Benefits (OPEB) Plan provided by the State Teachers Retirement System of Ohio (STRS Ohio). This report is for the use of STRS Ohio and their auditors in preparing financial reports in accordance with applicable law and accounting requirements. This report is not appropriate for other purposes, including the measurement of funding requirements for the Plan.

The actuary prepared the following supporting schedules including the Financial and Actuarial Sections of the *Comprehensive Annual Financial Report*:

- Financial/Required Supplementary Information
  - Schedule of Changes in Employers' Net OPEB Liability
  - Schedule of Employers' Net OPEB Liability
  - Schedule of Employers' Contributions – OPEB
  - Notes to Required Supplementary Information - OPEB
  - Sensitivity of the Net OPEB Liability to the Discount Rate and Trend Rate Assumptions
  
- Actuarial
  - Health Care Solvency Test
  - Key methods and assumptions used in Health Care Actuarial Valuation
  - Summary of Membership Data

In preparing our report, we relied on information (some oral and some written) supplied by STRS Ohio. This information includes, but is not limited to, the plan provisions, employee data, and financial information. We performed an informal examination of the obvious characteristics of the data for reasonableness and consistency in accordance with Actuarial Standard of Practice No. 23.

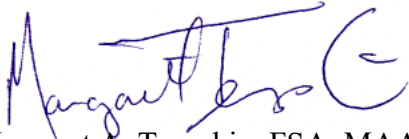

Future actuarial measurements may differ significantly from the current measurements due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions, changes in economic or demographic assumptions, changes in healthcare assumptions, and changes in plan provisions or applicable law. This report does not contain any adjustment for the potential impact of COVID-19. We anticipate the virus will impact both mortality and claims in the short term, as well as potentially other demographic experience. However, the net impact is not determinable at this time.

This report and its contents have been prepared in accordance with generally recognized and accepted actuarial principles and practices and our understanding of the Code of Professional Conduct and applicable Actuarial Standards of Practice set out by the Actuarial Standards Board as well as applicable laws and regulations. Furthermore, as credentialed actuaries, we meet the Qualification Standards of the American Academy of Actuaries to render the opinion contained in this report. This report does not address any contractual or legal issues. We are not attorneys, and our firm does not provide any legal services or advice.

**SECTION IV – DETERMINATION OF DISCOUNT RATE**

The discount rate as of June 30, 2021 is 7.00%, which is the assumed long-term expected rate of return on plan investments. Projections of the Plan's Fiduciary Net Position have indicated that it is expected to be sufficient to make projected benefit payments for current plan members following the procedures described in paragraphs 48-53 of GASB Statement 74. As such, the single rate of return, as required by the Statement, is equal to the long-term expected rate of return on the Plan's assets, which is 7.00%. The prior year's discount rate was 7.45% based on the assumed long-term expected rate of return on plan investments of 7.45%.

In developing the projection of cash flows used to determine the discount rate, we assumed that no employer contributions would go into the Health Fund. Projections indicate that all future net claims will be covered by current plan assets, and trust fund earnings on investments.

*Amounts in Thousands*

During the measurement year, the NOL decreased by approximately \$0.35 billion. The service cost and interest cost increased the NOL by approximately \$0.45 billion, while contributions plus investment gains offset by administrative expenses decreased the NOL by approximately \$1.47 billion.

There were changes in benefits during the year, which increased the TOL by approximately \$0.56 billion. There were changes in assumptions during the measurement year, which decreased the TOL by approximately \$0.13 billion. The assumption changes included the change in discount rate. There was a liability gain of approximately \$0.12 billion during the year due to experience.

**SECTION V – GASB 74 REPORTING INFORMATION**

Changes in the discount rate affect the measurement of the TOL. Lower discount rates produce a higher TOL, and higher discount rates produce a lower TOL. The table below shows the sensitivity of the NOL to the discount rate.

<b>Table V - 2 Sensitivity of Net OPEB Liability to Changes in Discount Rate</b>			
	<b>1% Decrease 6.00%</b>	<b>Discount Rate 7.00%</b>	<b>1% Increase 8.00%</b>

*Amounts in Thousands*

A one percent decrease in the discount rate increases the TOL by approximately 12% and increases the NOL by approximately 16%. A one percent increase in the discount rate decreases the TOL by approximately 10% and decreases the NOL by approximately 13%.

Changes in healthcare trends also affect the measurement of the TOL. Lower healthcare trends produce lower TOL, and higher healthcare trends produce a higher TOL. The table below shows the sensitivity of the NOL to healthcare trends.

<b>Table V - 3 Sensitivity of Net OPEB Liability to Changes in Healthcare Cost Trend Rates</b>			
	<b>1% Decrease</b>	<b>Healthcare Trend</b>	<b>1% Increase</b>

**SECTION VI – GASB 75 REPORTING INFORMATION**

The schedules in this section provide the information the System needs to report under GASB 75. The impact of experience gains or losses and assumption changes on the TOL are recognized in the expense over the average expected remaining service life of all active and inactive members of the Plan. As of the measurement date, this recognition period was seven years.

The table below summarizes the current balances of deferred outflows and Deferred Inflows of Resources related to the Plan along with the net recognition over the next five years and the total recognition thereafter if any.

<b>Table VI - 1</b>

ACTUARIAL VALUATION AND GASB 74/75 REPORTING  
FOR JUNE 30, 2021 MEASUREMENT DATE**

**SECTION VI – GASB 75 REPORTING INFORMATION**

During the year, benefit changes increased the TOL by approximately \$557.0 million. Benefit changes are recognized immediately.

During the year, actual experience differed from assumed experience decreasing the TOL by approximately \$116.6 million. Approximately one-seventh of this was recognized in the current year, and an identical amount will be recognized in each of the next six years, resulting in a Deferred Outflow of Resources of approximately \$100.0 million. In addition, assumption changes (including a change in healthcare cost and trends) decreased the TOL by approximately \$130.0 million. Approximately \$18.6 million was recognized in the current year, and an identical amount will be recognized in each of the next six years, resulting in a deferred inflow of resources of approximately \$111.5 million.

The impact of investment gains or losses is recognized over a period of five years. During the measurement year, there was an investment gain of \$834.7 million. Of that gain, \$166.9 million was recognized in the current year, and an identical amount will be recognized in each of the next four years, resulting in a deferred inflow of resources as of June 30, 2020 of \$667.7 million.

Please refer to table VI – 2 for the complete schedule of deferred inflows and deferred outflows of resources.

**Annual OPEB Expense**

The annual OPEB expense can be calculated in two different ways. First, it is the change in the amounts reported on the System’s Statement of Net Position that relate to the Plan and are not attributable to employer contributions. That is, it is the change in the NOL minus the change in deferred outflows plus the change in deferred inflows plus employer contributions during the year.

Alternatively, annual OPEB expense can be calculated by its individual components. While GASB does not require or suggest the organization of the individual components shown in the table on the next page, we believe it helps to understand the level and volatility of the OPEB expense.

In the calculation of OPEB expense by individual components, there are three separate sections. First, there are components referred to as operating expenses. These are items directly attributable to the operation of the Plan during the measurement year. Service cost less employee contributions represents the increase in employer-provided benefits attributable to the measurement year, and administrative expenses are the cost of operating the Plan for the year.

Second, there are the financing expenses: the interest on the TOL less the expected return on assets.

The final category is changes. This category will drive most of the volatility in OPEB expense from year to year. It includes any changes in benefits made during the year and the recognized amounts due to assumption changes, gains or losses on the TOL, and investment gains or losses.

The table on the following page shows the development of the OPEB expense through both of these methodologies. In addition to the information shown below, any contributions between the measurement date and the reporting date would be reported as deferred outflows of resources to offset the cash outflows reported.

**APPENDIX B – ACTUARIAL ASSUMPTIONS AND METHODS**

The assumptions for this valuation were selected based on recent experience and expectations for the future. Many of the demographic assumptions were selected by the prior actuary based on their prior experience study. We have not performed our own experience study but reviewed the reports and letters of the prior actuary and believe the assumptions to be reasonable.

**Economic Assumptions**

- 1. Expected Return on Assets**      7.00% per year, based on the long-term rate of return on invested plan assets
  
- 2. Municipal Bond Yield**      2.16% as of June 30, 2021  
Bond Buyer 20-Bond GO Index as of June 26, 2021
  
- 3. Discount Rate**      7.00%, based on a blend of 2.16% municipal bond yield rate and the expected return on invested plan assets. The assets are sufficient to cover all expected benefits, thus the long-term rate of return is used.
  
- 4. Payroll Increase Rate**      3.00% per year for purposes of attributing individual costs under the Entry Age actuarial cost method
  
- 5. Salary Increase Rate**      Varies by age from 2.5% to 12.5%
  
- 6. Per Person Health Care Cost Trends**

Medical trend assumptions used were developed using the Society of Actuaries (SOA) Long-Run Medical Cost Trend Model. The SOA model was released in December 2007, and version 2020\_b was used for this valuation. The following assumptions were used as input variables into this model:

<b>Trend Assumption Inputs</b>	
<b>Variable</b>	<b>Rate</b>
Rate of Inflation	2.50%
Rate of Growth in Real Income/GDP per capita 2029+	1.50%
Extra Trend due to Taste/Technology 2029+	1.20%
Expected Health Share of GDP 2029	20.0%
Health Share of GDP Resistance Point	25.0%
Year for Limiting Cost Growth to GDP Growth	2040

The SOA Long-Run Medical Cost Trend Model and its baseline projection are based on an econometric analysis of historical U.S. medical expenditures and the judgments of experts in the field. The long-run baseline projection and input variables have been developed under the guidance of the SOA Project Oversight Group.

The ultimate trend rate reflects an assumed nominal per capita GDP growth.

**7. Changes Since the Last Valuation**

2021 Healthcare trends were updated to reflect the FYE 2022 projected Medicare rates. Medicare premium and contribution trends were updated as a result of a change in methodology regarding the adjustments made to gross costs to determine the Medicare premiums. This methodology change resulted in lower premium and therefore lower retiree contribution.

**1. Retirement Rates**

Pension eligibility requirements are age 60 with five years of service, or 30 years of service regardless of age, or according to the following schedule:

Retirement Effective Date	Minimum Age and Years of Service
8/1/2015 - 7/1/2017	Age 55 and 26 years
8/1/2017 - 7/1/2019	Age 55 and 27 years

*Disabled Mortality:* RP-2014 Disabled Mortality table with 90% of rates for males and 100% of rates for females, projected forward generationally using mortality improvement scale MP-2016.

**4. Percent of Retirees Electing Coverage**

- 75% of future eligible service retirees and 65% of future eligible disabled retirees are assumed to elect coverage.
- 100% of combined plan and 50% of defined benefit plan future inactive vested participants are assumed to cash out.
- 30% of inactive vested participants who do not cash out are assumed to elect coverage.
- Current and future participants for whom the value of the benefits received is less than their contribution are assumed to drop coverage.

**5. Benefit Elections**

Below is a summary of the medical plan election rates for future retirees by Medicare status.

Pre-Medicare Medical Plans	Benefit Election Rate
Medical Mutual / Aetna Basic PPC	93.7%
AdultCare PPO	3.0%
Paramount Health Care HMO	3.3%

Medicare Medical Plans	Benefit Election Rate
Aetna Medicare Advantage	94.2%
Medical Mutual / Aetna Basic PPC	3.9%
AdultCare PPO	1.0%
Paramount Health Care HMO	0.9%

These weights were used to blend premium rates developed by Wakely, less applicable subsidies, discounts, and rebates (the “Recoveries”), to estimate individual retiree and spouse costs by age and gender.

**6. Spousal Coverage**

Of those future retirees who elect to continue health coverage, 20% were assumed to have an eligible spouse who also opts for health coverage at that time.

**7. Dependent Age**

For current retirees, the actual spouse date of birth was used when available.

For future retirees, male retirees are assumed to be three-years older than their partners, and female retirees are assumed to be one-year younger than their partners.

**8. Administrative Expenses**

Health plan administrative expenses are included in the per capita claims costs.

**9. Changes Since the Last Valuation**

## **Claim and Expense Assumptions**

The claims costs are developed based on CY 2020 and CY 2021 projected premiums provided by STRS Ohio and developed by its vendor (Wakely, Aetna, AultCare, and Paramount). For the EGWP plans, claims costs are defined as the Plan cost net of all recoveries (i.e., net of Rx rebates, Gap Discount rebates, Part D direct subsidy, Low-income cost share, and Federal Reinsurance), using the gross paid claims PMPM, the Rx rebates and pharma Gap Discounts PMPM, and the CMS Part D Direct subsidy and Federal Reinsurance payment PMPM as projected by Wakely and documented in Wakely's 2021 Final Self Funded Rates memo dated July 16, 2020. For each plan (e.g., Basic vs. Aetna vs. Aultcare vs. Paramount), each benefit (i.e., medical vs. Rx), and each population (i.e., Non-Medicare vs Medicare A&B vs. Medicare B only) we calculate the projected FYE 2021 rate PMPM as the average of the CY 2020 and CY 2021 rate. Using the June 30, 2020 retiree membership distribution by plan and population, we calculate four rates: a Non-Medicare Eligible (NME) medical rate, a NME Rx rate, a Medicare Eligible (ME) medical rate, and a ME Rx rate. The resulting PMPM rates are then adjusted using age curves.

### **1. Average Annual Claims and Expense Assumptions**

The following 7/1/2020-6/30/2021 claims costs were developed based on:

- The average of the 2020 and 2021 premium rates the System pays its vendors,
- The average Wakely's projected 2019 and 2020 Employer Group Waiver Program (EGWP) Recoveries that the System is expected to receive for CY 2020 and CY 2021 prescription filled dates, and
- An estimate of the Rx rebates PPPM for the Non-Medicare population-based on actual 2018 Non-Medicare Rx rebates.

All rates were converted from a Per Adult or Per Child rate to a composite Per Person rate. A child load of 3.1% for medical and 1.9% for Rx was added onto the NME pre-65 claims and expenses to account for the fact that only adults are inputted in ProVal.

For the Medicare population, we also calculate the projected FYE 2022 rates PMPM as the average of the CY 2021 and CY 2022 rate, using Wakely’s 2022 Final Self Funded Rates memo dated June 15, 2021. 2021 trends were adjusted to match the current projected FYE 2022 Medicare rates.

**2. Retiree Contributions**

In 2020, non-Medicare retirees receive a subsidy of 1.984% per year of service to a maximum of 30 years, and Medicare AMA retirees receive a subsidy of 2.1% per year of service to a maximum of 30 years. In 2021, Non-Medicare retirees receive a subsidy of 2.055% per year of service to a maximum of 30 years. In 2022, Non-Medicare retirees will received a subsidy of 2.1%.

Beginning in 2023, the STRS Ohio subsidy dollar amount for Non-Medicare plans will be frozen at the current 2022 levels. Annual increases in the STRS Ohio subsidy dollar amount for Medicare plans will be based on the annual percentage increase in the Aetna Medicare Advantage Plan, limited at 6%.

For those who retire on or after August 2023, the first five years of service do not count towards the subsidy, so subsidy percentages are shifted five years, and those with less than 20 years of service receive no subsidy. The following table shows the blended medical and Rx premium for pre-Medicare and Medicare plans.

Sample monthly premium subsidies paid by the STRS of Ohio pays for Eligible Retirees for the year beginning January 1, 2021 are shown on the next page.

### 3. Medicare Part D Subsidy

The Medicare Part D subsidy is expected to be negative in CY 2022. An estimate of -\$0.78 per Medicare participant is included in the FYE 2022 rates. We assumed the Part D Direct subsidy decreases by \$36 annually for the first 3 years, then by 25% for the next 12 years; subsequently, the Part D Direct subsidy is implicitly trended when the trends showed on page 16 of this report are applied to the net Medicare Rx claims and expenses. Per GASB guidance, RDS Part D Subsidies are not reflected in valuations.

### 4. Medicare Part B Premium Subsidy

Service retirees and disabled retirees who are enrolled in an STRS Ohio medical plan and who participate in Medicare Part B receive \$29.90 monthly reimbursement towards the Part B premiums.

**ProVal**

Cheiron utilizes ProVal, an actuarial valuation software leased from Winklevoss Technologies (WinTech) to calculate the liabilities, Normal Costs, and projected benefit payments. We have relied on WinTech as the developer of ProVal. We have reviewed ProVal and have a basic understanding of it and have used ProVal in accordance with its original intended purpose. We have not identified any material inconsistencies in assumptions or output of ProVal that would affect this actuarial valuation.

**Getzen Trend Model**

Medical Trend assumptions were developed using the Society of Actuaries (SOA) Long-Run Medical Cost Trend Model version 2020\_b. We have relied on the Society of Actuaries as the developer of the Model. We have reviewed the Model and have a basic understanding of the Model and have used the Model in accordance with its original intended purpose. We have not identified any material inconsistencies in assumptions or output of the Model that would affect this report.

**Projection Model**

Projections in this report were developed using H-Scan, our proprietary tool for developing deterministic projections to illustrate the impact of changes in assumptions, methods, plan provisions, or actual experience (particularly investment experience) on the future financial status of the Plan.

The H-Scan projection uses standard roll-forward techniques that implicitly assume a stable active population. Changes in the demographic characteristics of the active population will lead to different results

## **Summary of Key Substantive Plan Provisions**

### **Eligibility**

The eligibility requirements for access to retiree health care coverage and premium subsidies are as follows:

#### **Service Retiree Who Retires Before August 2023**

If with 15 or more years of service, then retiree receives access to healthcare coverage and a premium subsidy if they enroll.

If with less than 15 years of service and a benefit effective date prior to January 1, 2004, then the retiree receives access to healthcare coverage but no premium subsidy.

If with less than 15 years of service and a benefit effective date on or after January 1, 2004, then the retiree is not eligible for health care coverage.

#### **Service Retiree Who Retires After August 2023**

If with 20 or more years of service, then retiree receives access to healthcare coverage and a premium subsidy if they enroll.

If with less than 20 years of service and a benefit effective date on or after January 1, 2004, then the retiree is not eligible for health care coverage.

### **Disabled Retiree**

Receives access to healthcare coverage and a premium subsidy if they enroll.

### **Effective Date of Coverage**

#### **Service Retirement Benefit of Survivor Benefit Recipients**

The first of the month following the date the STRS Ohio Retirement Board approves the application, or the effective date of retirement, whichever is later.

#### **Service Retirement Benefit of Disability Benefit Recipients**

The first of the month following the date the STRS Ohio Retirement Board approves the disability benefits, or the first of the month following the date the application is received by STRS Ohio, whichever is later.

**Duration of Coverage**

Lifetime

**Dependent Benefits**

Same as retirees, except for no partial reimbursement towards Medicare Part B premium.

**Dependent Coverage**

Dependents of retirees and survivors are eligible to enroll in health care coverage but do not receive a premium subsidy. Individuals who become surviving spouses prior to January 1, 2015 receive a premium subsidy at the same level as the deceased member for five years with first-year beginning the later of January 1, 2004, or the effective date of benefit commencement. After five years, surviving spouses receive access to coverage with no premium subsidy. Individuals who become surviving spouses on or after January 1, 2015, do not receive a premium subsidy.

ACTUARIAL VALUATION AND GASB 74/75 REPORTING

**APPENDIX D – GLOSSARY OF TERMS**

**1. Actuarial Assumptions**

Assumptions as to the occurrence of future events affecting OPEB costs, such as mortality, withdrawal, and retirement; changes in compensation; rates of investment earnings and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

**2. Actuarial Cost Method**

A procedure for determining the Actuarial Present Value of OPEB plan benefits and expenses and for developing an allocation of such value to each year of service, usually in the form of a Normal Cost and an Actuarial Liability.

**3. Actuarially Determined Contribution**

A target or recommended contribution for the reporting period, determined in conformity with Actuarial Standards of Practice based on the most recent measurement available when the contribution for the reporting period was adopted.

**4. Actuarial Gain (Loss)**

A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, as determined in accordance with a particular actuarial cost method.

**5. Actuarial Liability**

The portion of the Actuarial Present Value of projected benefits which will not be paid by future Normal Costs. It represents the value of the past Normal Costs with interest to the valuation date.

**6. Actuarial Present Value (Present Value)**

The value as of a given date of a future amount or series of payments, the Actuarial Present Value discounts the payments to the given date at the assumed investment return and includes the probability of the payment being made. As a simple example: assume you owe \$100 to a friend one year from now. Also, assume there is a 1% probability of your friend dying over the next year, in which case you will not be obligated to pay him. If the assumed investment return is 10%, the Actuarial Present Value is:

$$\frac{\text{Amount}}{\$100} \times \frac{\text{Probability of Payment}}{(1 - .01)} \times \frac{1/(\text{1+Discount Rate})}{1/(1+.1)} = \frac{\text{Present Value}}{\$90}$$

**APPENDIX D – GLOSSARY OF TERMS**

**7. Actuarial Valuation Date**

The date as of which an actuarial valuation is performed. This date may be up to 24 months prior to the measurement date and up to 30 months prior to the employer's reporting date.

**8. Actuarial Value of Assets**

The value of cash, investments, and other property belonging to an OPEB plan as used by the actuary for the purpose of an actuarial valuation. The purpose of an Actuarial Value of Assets is to smooth out fluctuations in market values. This way long-term costs are not distorted by short-term fluctuations in the market.

**9. Amortization Payment**

The portion of the OPEB plan contribution which is designed to pay interest and principal on the Unfunded Actuarial Liability in order to pay for that liability in a given number of years.

**10. Entry Age Normal Actuarial Cost Method**

A method under which the Actuarial Present Value of the projected benefits of each individual included in an actuarial valuation is allocated on a level basis over the earnings of the individual between Entry Age and assumed exit ages.

**11. Normal Cost**

That portion of the Actuarial Present Value of OPEB plan benefits and expenses which is allocated to a valuation year by the actuarial cost method.

**12. Unfunded Actuarial Liability**

The excess of the Actuarial Liability over the Actuarial Value of Assets.

**13. Funded Percentage**

The ratio of the Actuarial Value of Assets to the Actuarial Liabilities.

**14. Mortality Table**

A set of percentages which estimate the probability of death at a particular point in time. Typically, the rates are annual and based on age and sex.

**15. Discount Rate**

The assumed interest rate used for converting projecting dollar related values to a present value as of the valuation date.

**16. Medical Trend**

The assumed increase in dollar related values in the future due to the increase in the cost of health care.

**17. Deferred Inflow of Resources**

An acquisition of net assets by a government employer that is applicable to a future reporting period. In the context of GASB 75, these are experience gains on the Total OPEB Liability, assumption changes reducing the Total OPEB Liability, or investment gains that are recognized in future reporting periods.

**18. Deferred Outflow of Resources**

A consumption of net assets by a government employer that is applicable to a future reporting period. In the context of GASB 75, these are experience losses on the Total OPEB Liability, assumption changes increasing the Total OPEB Liability, or investment losses that are recognized in future reporting periods.

**19. Entry Age Actuarial Cost Method**

The actuarial cost method required for GASB 74 and 75 calculations. Under this method, the Actuarial Present Value of the projected benefits of each individual included in an actuarial valuation is allocated on a level basis over the earnings of the individual between Entry Age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the service cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future service costs is called the Total OPEB Liability.

**20. Measurement Date**

The date as of which the Total OPEB Liability and Plan Fiduciary Net Position are measured, the Total OPEB Liability may be projected from the actuarial valuation date to the measurement date. The measurement date must be the same as the reporting date for the plan.

**APPENDIX D – GLOSSARY OF TERMS**

**21. Net OPEB Liability**

The liability of employers and non-employer contributing entities for employees for benefits provided through a defined benefit OPEB plan. It is calculated as the Total OPEB Liability less the Plan Fiduciary Net Position.

**22. Plan Fiduciary Net Position**

The fair or Market Value of Assets.

**23. Reporting Date**

The last day of the Plan or employer's fiscal year.

**24. Service Cost**

The portion of the Actuarial Present Value of projected benefit payments that is attributed to the current period of employee service in conformity with the requirements of GASB 74 and 75. The service cost is the Normal Cost calculated under the Entry Age actuarial cost method.

**25. Total OPEB Liability**

The portion of the Actuarial Present Value of projected benefit payments that is attributed to past periods of employee service in conformity with the requirements of GASB 74 and 75. The Total OPEB Liability is the Actuarial Liability calculated under the Entry Age actuarial cost method.
